APNA KHAANA

Tasty food, made to fit you: a repeatable, personalised cloud-kitchen model.

SEED ROUND · PITCH DECK

Raising ₹4 crore · ₹16 crore pre-money · 20% stake

Pransh Gupta · Team project

PROBLEM

Health demand is real. The delivery model can't keep up.

Personalisation gets lost.

A free-text “less oil, more protein” request routinely gets missed by a busy kitchen.

Discounting erodes the model.

Aggregator commissions strip 25-35% of every order, and 30-40% of cloud-kitchen brands exit annually.

58%

of urban consumers now prioritise nutrition over taste

94%

want healthier food without losing flavour

176M

health-conscious consumers by 2026

The gap isn't demand. It's a system built to fulfil it.

SOLUTION

Personalisation, built as a system: not a menu.

Spice level	**Oil level**	**Protein source**	**Meal base**	**Nutritional add-ons**

The differentiation is operational, not culinary: far harder to copy than a menu.

WHY NOW

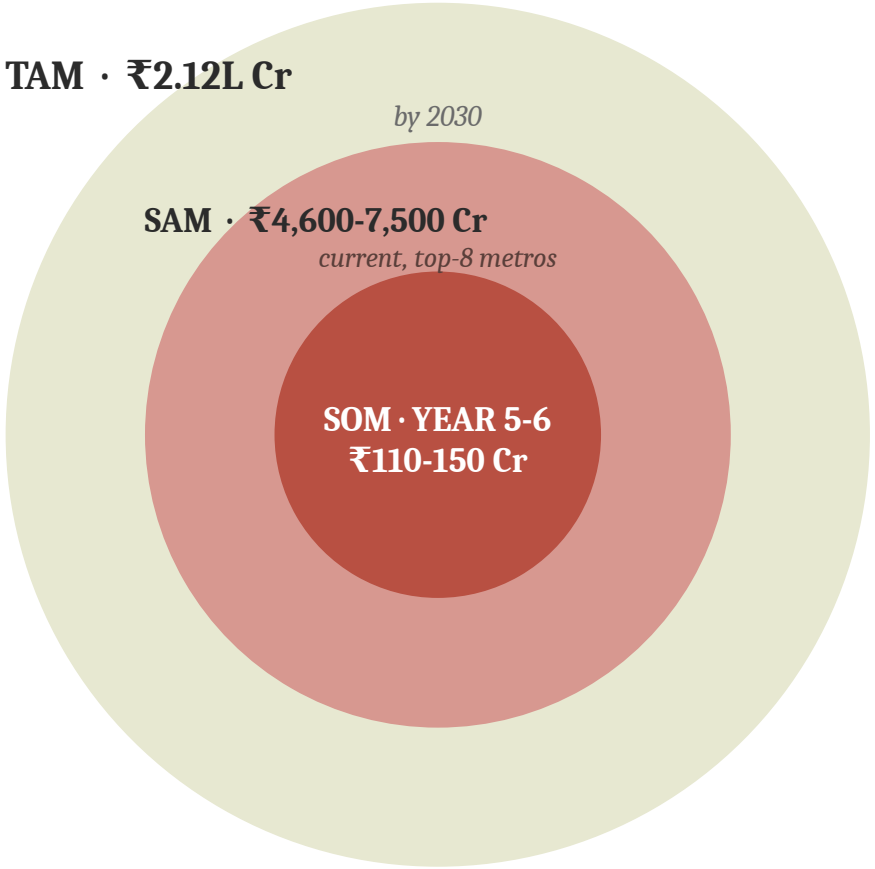

April 2025

Swiggy launches a dedicated High Protein category across 30 cities.

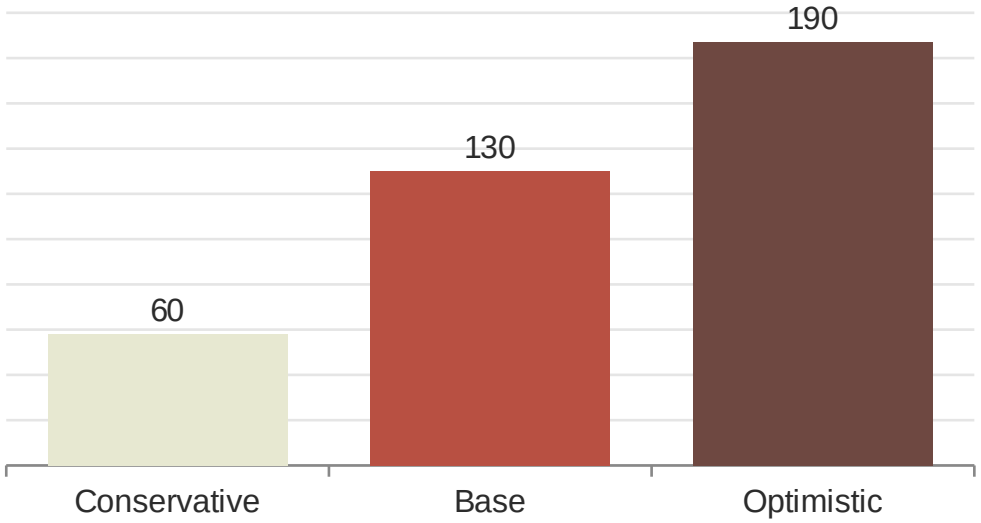

February 2025

ICMR-NIN and FSSAI revise dietary guidance, capping oil and sugar intake.

A defensible ₹110-150 Cr slice of a ₹2.12L Cr market

YEAR 5-6 SOM · SENSITIVITY

CONSERVATIVE	₹52-63 cr	2.6-4.7x
BASE CASE	₹110-150 cr	5.5-11x
OPTIMISTIC	₹165-208 cr	8.3-15.6x

Even the conservative case clears a credible return.

BUSINESS MODEL

Four streams, one direction: away from aggregators.

A la carte delivery

₹320 AOV

Core today: Swiggy and Zomato for discovery, own app for direct orders.

Meal-plan subscriptions

RETENTION LEVER

Weekly and monthly plans raise retention and smooth kitchen demand.

Corporate & gym catering

35-40% REPEAT

Highest margin, lowest acquisition-cost channel in cloud kitchens.

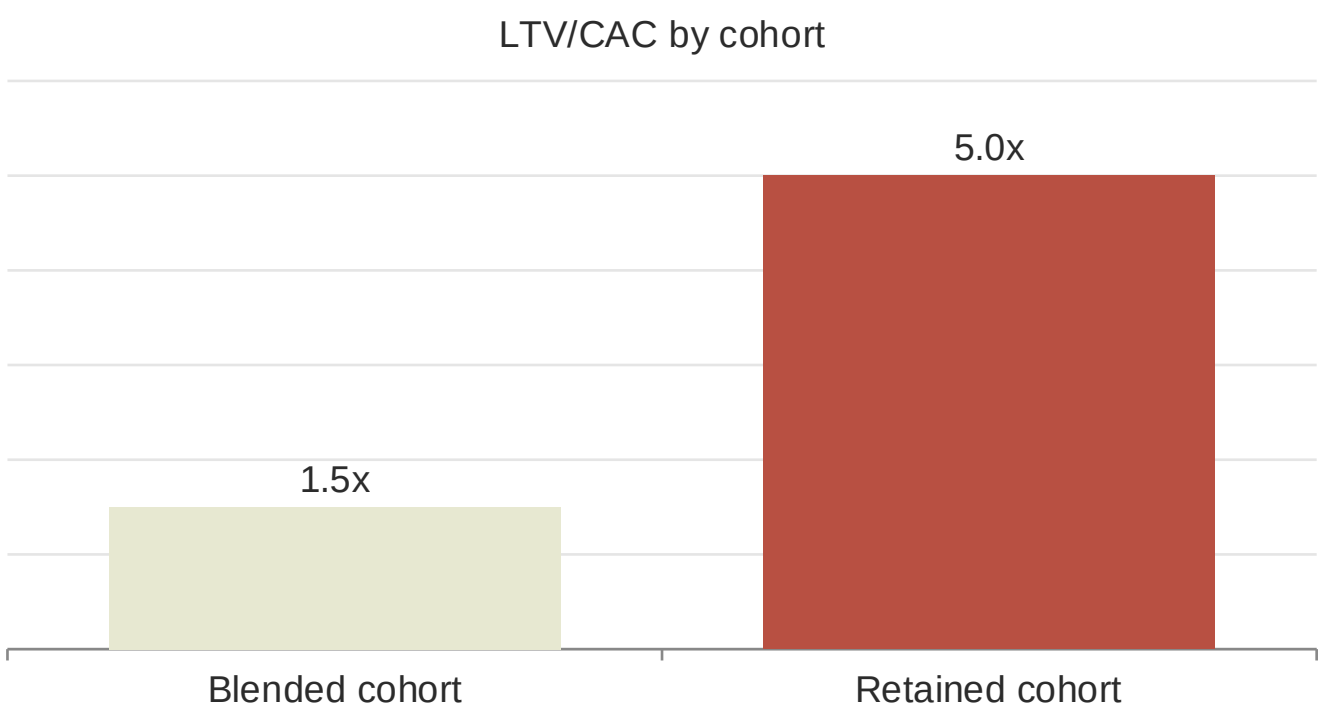

Premium nutritional add-ons

UPSELL

Upsell layer on the core order.

Aggregators strip 25-35% per order and take 85.6% of a comparable operator's sales. We use them for acquisition, not revenue; retained customers migrate to channels with 15-20 points more margin.

One number decides this business: repeat rate.

₹320

Average order value

₹58-80

Contribution per order

₹400-600

Blended CAC

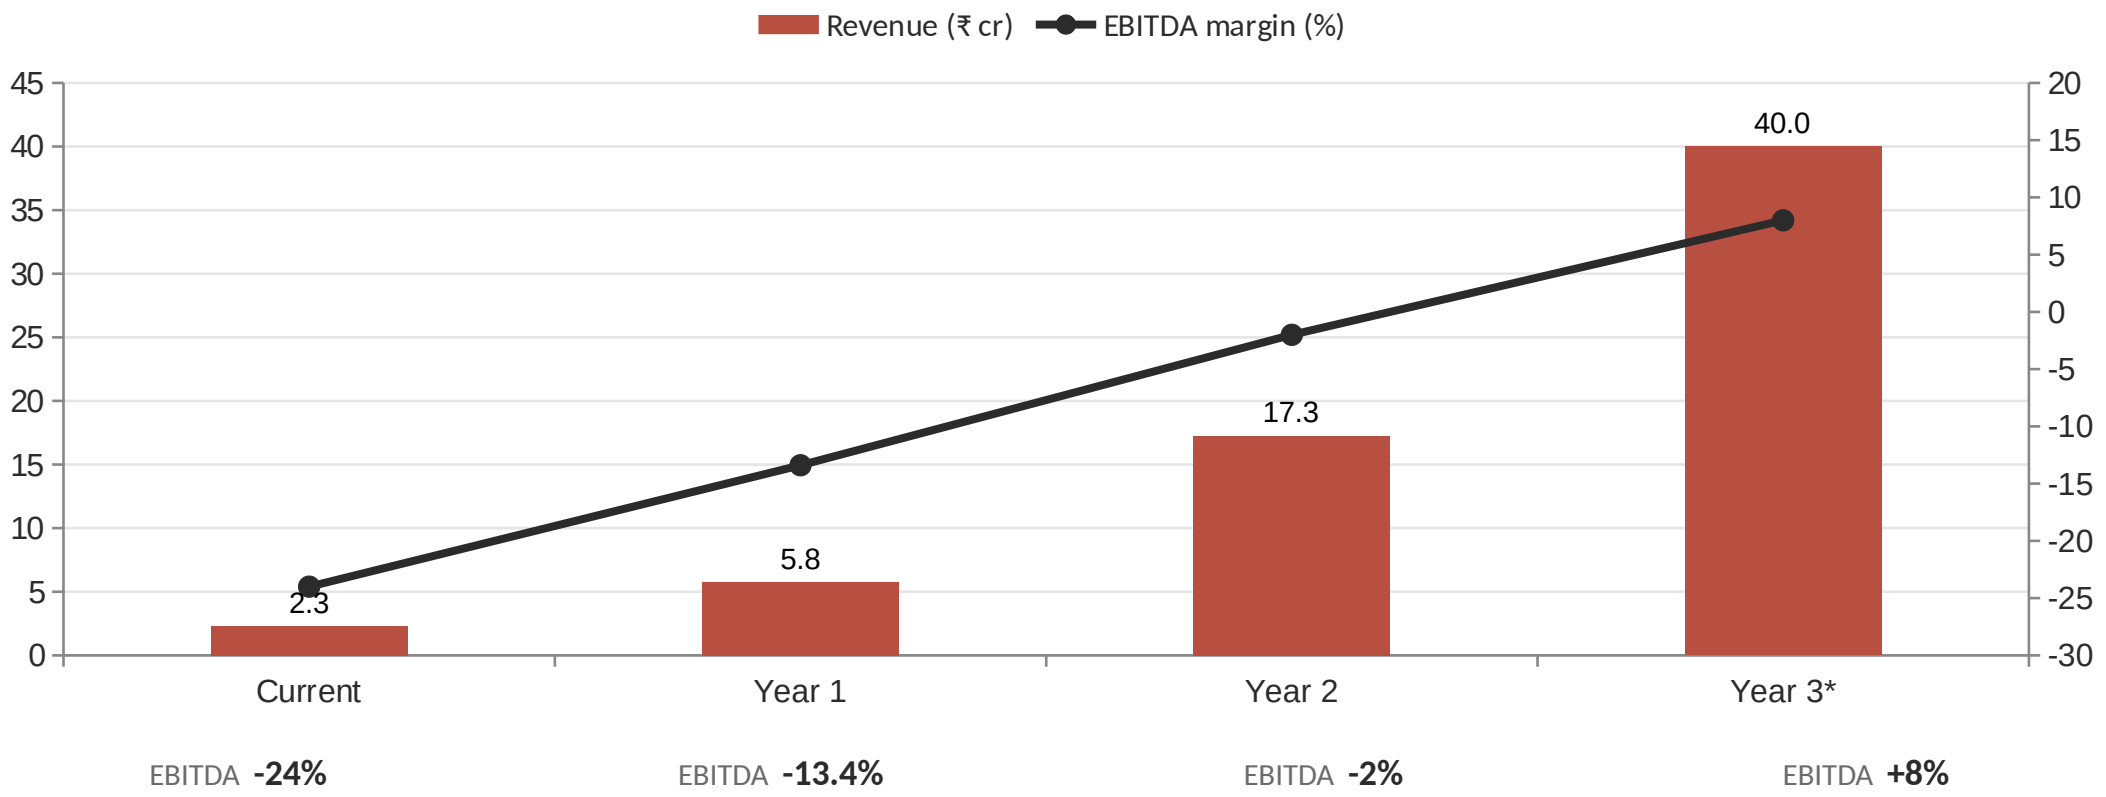

3.0x

Sector LTV/CAC bar

Blended shown at range midpoint (1.2-1.8x). Sector bar is 3.0x.

Personalisation exists to move customers from the blended cohort to the retained one. That gap is the investment case.

Contribution-positive today. EBITDA-positive by Year 3.

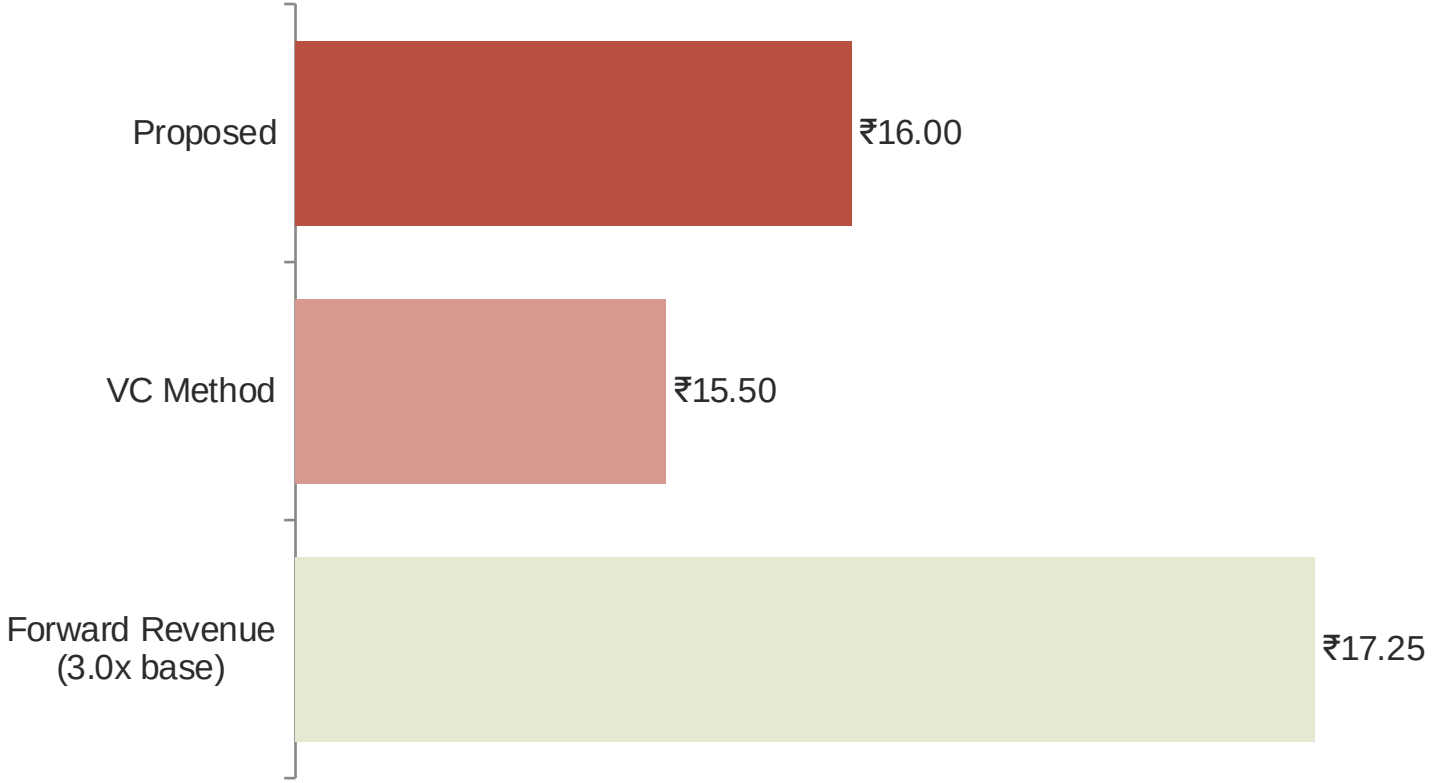

**Year 3 shown at range midpoint; actual range is ₹35-45 crore revenue at an 8% margin.*

The business already covers its variable costs. What's missing is scale.

VALUATION

Two methods, one number: ~₹16 Cr pre-money.

₹20 cr

Post-money valuation

20%

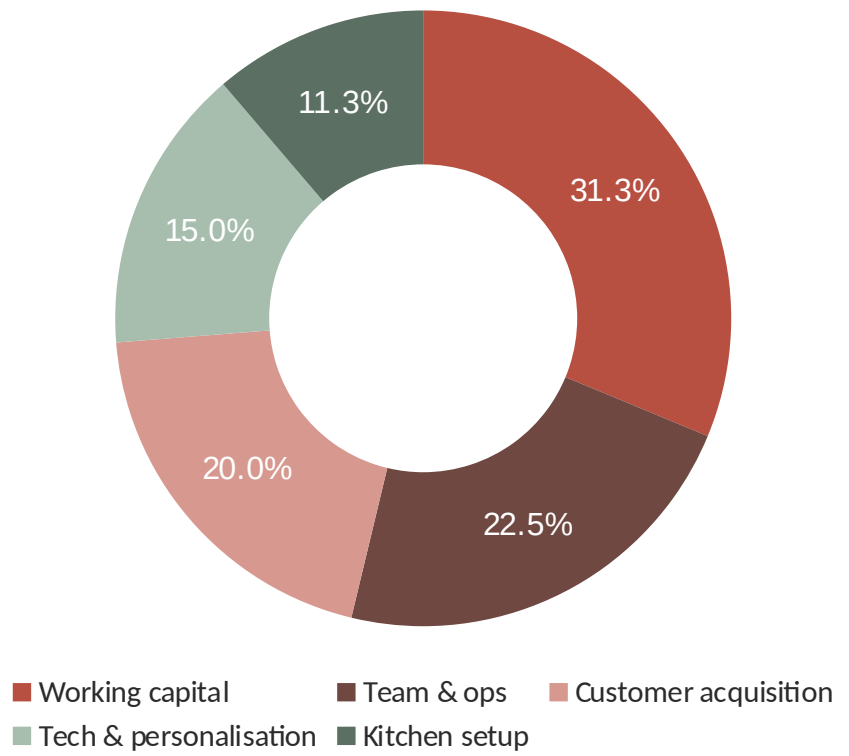

Investor ownership

The forward-revenue method favours near-term growth; the VC method prices in execution risk. ₹16 crore sits between them.

FUNDING ASK

₹4 Cr to prove the model at 5 kitchens.

USE OF ₹4 CR · YEAR 1

₹15L per additional kitchen, benchmarked against published setup costs

YEAR 1 TARGETS

2 → 5

Kitchens

6,000 → 15,000

Monthly orders

₹2.3 cr → ₹5.75 cr

Annualised revenue

A proof point for a credible Series A, not a promise ahead of one.

RISK FACTORS

Four risks. Four practical mitigations.

Personalisation complexity

Fixed options, standard recipes, and error tracking per combination.

Aggregator dependence

Migrate repeat customers to direct, subscription, and corporate channels.

Weak retention

Personalised meals, subscriptions, and cohort-level tracking.

Food safety / quality

Standard SOPs, supplier checks, and central quality control.

EXIT STRATEGY

Strategic acquisition is the base case; IPO the upside.

Seed → **Multi-city scale** → **Strategic interest** → **Acquisition / Secondary**

METRICS THAT MAKE THIS EXIT POSSIBLE

- 70-90 kitchens across 4-5 metros, ₹110-150 cr revenue by Year 5-6
- Higher share of direct-channel revenue, 35%+ repeat rate
- Positive EBITDA and a proven, repeatable operating model

COMPARABLE: SWIGGY IPO

Nov 2024 · $533M fresh issue + $809M OFS · subscribed 3.59×

Confirms a credible public-market exit route exists in the category, viewed as an upside option rather than the primary plan.

The Ask

₹4 cr
Seed raise

₹16 cr
Pre-money valuation

20%
Investor ownership

₹5.75 cr
Year-1 revenue target

Personalisation → higher repeat → improved LTV/CAC → direct-channel migration → operating leverage → EBITDA profitability

Thank you
